

CARE INSTRUCTIONS

Aaronia Canopies and Shield®

PLEASE NOTE

Wash the canopy or Aaronia-Shield fabric as little as possible. Every washing cycle can lead to the wear of the silver ingrained in every single thread and with that - reduce the overall shielding efficiency.

If you have to wash/clean the fabric, please follow the instructions!

INSTRUCTIONS

- Please take down the canopy. Remove the metal cross from the pyramid canopy.
- Hand-wash the canopy with laundry detergent for delicate fabrics only. The canopy can be washed at maximum 30°C. Please take care that the detergent doesn't contain whitener/bleach.
- Now hang out the wet canopy. Crinkles will hang out after a while. It's possible to install the canopy in wet condition to the mounting device.
- Do not iron or dry the canopy!

PLEASE BE AWARE

After a while every material is bound to degrade due to aging processes. Aaronia-Shield is no exception to that. Bleeding and darkening is normal and no material defect. Please check the canopy's thread eyes and the mounting device regularly for stability, cuts and damages.

SECURITY ADVICE

Grounding the area is necessary. The grounding has to be done by the accepted rules of technic, especially the following DIN-/VDE standards, and the allegation of the local electric power company has to be noted: Safeguard against dangerous body currents (57100/VDE 0100 part 410 + 540). Visual check and control (DIN/VDE 0100 part 610, chapter 4+5) EMV (VDE 0100).

Make sure you are using our grounding set, Art. No 810 or 811, to ground the Aaronia Shield material, in order to achieve the current directive.
